# CheckBox Widget 익히기 실습

배 희호 교수 경복대학교 스마트IT과

- CheckBox는 사용자의 화면 Touch(Click Event)에 따라 "선택됨(checked)" 또는 "선택되지 않음(unchecked)"의 상태를 표시하기 위해 사용되는 Component
- CheckBox는 한가지 이상 중복 체크가 가능한 상황에 쓰이는 Widget
  - ■취미생활이나 좋아하는 것과 같은 모두 고르시오 옵션에 알맞은 Widget
  - 여러 개의 체크박스는 서로 독립적으로 동작

#### ■속성

속성	내용
text	체크박스 모양 오른쪽에 나타나는 문자열을 지정
checked	체크박스에 체크 표시를 할 것인지 말 것인지를 지정 (true/false)
clickable	사용자가 체크박스를 클릭할 수 있는지를 설정 (true/false)

#### ■ XML 코드

```
<CheckBox
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:text="check"
    android:checked="true" />
```

- android:text="check"
  - ■체크박스 옆에 나오는 문자열
- android:checked="true"
  - ■처음부터 체크된 상태로 보여줄 때 사용

#### ■메소드

메소드	내용		
isChecked()	체크 여부를 true/false로 반환		
performClick()	사용자가 뷰를 클릭한 것처럼, 뷰의 OnClickListener를 호출		
setChecked(boolean checked)	체크 상태를 설정		
setOnCheckedChangeListener (CompoundButton.OnChecked ChangeListener listener)	체크 상태의 변경을 감지하는 리스너를 등록		
toggle()	체크 상태를 반대로 변경		
getText()	텍스트를 추출		

- Button과 CheckBox의 공통점
  - Button과 CheckBox의 기본적인 사용 목적이 사용자가 화면을 Touch했을 때 발생하는 Click Event를 처리하기 위한 것
- Button과 CheckBox의 차이점
  - CheckBox는 "선택됨(checked)"과 "선택되지 않음 (unchecked)"으로 구분된 2가지 상태를 가진다는 것
- CheckBox 용도
  - 다수의 Checkbox 항목 중에서 선택 (선택하지 않거나, 하나 또는 다수의 항목 선택)
  - ■하나의 CheckBox 항목으로 옵션을 켜기(On)나 끔(Off)

■ 여러 개를 선택할 수 있는 Button

구분	설명	
라디오 버튼(radio button)	하나만 선택	
체크박스(Check Box)	여러 개 선택	

■ CheckBox의 일반적인 형태가 사각형

체크박스(Check Box) ■ C ■ HTML ■ CSS ■ JAVA ■ JavaScript ■ Android

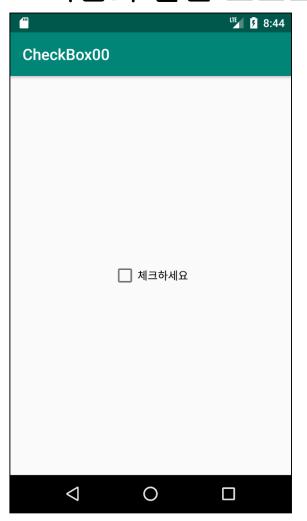

- 기본값 지정하기
  - 특정 항목을 선택된 채로 출력하려면 checked 속성을 사용

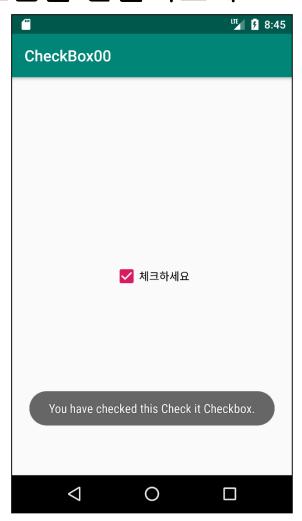

#### ■ 다음과 같은 프로그램을 만들어보자

#### activity\_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"</p>
  xmlns:tools="http://schemas.android.com/tools"
  android:layout_width="match_parent"
  android:layout_height="match_parent"
  android:orientation="vertical"
  android:gravity="center"
  tools:context=".MainActivity">
  <CheckBox
     android:id="@+id/checkBox"
     android:layout_width="wrap_content"
     android:layout_height="wrap_content"
     android:text="체크하세요"/>
</LinearLayout>
```

#### MainActivity.JAVA

```
public class MainActivity extends AppCompatActivity {
    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
}
```

#### MainActivity.JAVA

```
CheckBox checkBox = findViewByld(R.id.checkBox);
if (checkBox != null) {
  checkBox.setOnCheckedChangeListener(
             new CompoundButton.OnCheckedChangeListener() {
     @Override
     public void on Checked Changed (Compound Button button View,
                                         boolean isChecked) {
        String msg = "You have " + (isChecked ? "checked": "unchecked")
                                      + " this Check it Checkbox.";
        Toast. make Text (getBaseContext(), msg,
                                      Toast. LENGTH_SHORT).show();
```

#### activity2\_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:tools="http://schemas.android.com/tools"
    android:id="@+id/container"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:gravity="center"
    android:orientation="vertical"
    tools:context=".MainActivity2">
</LinearLayout>
```

#### MainActivity2.JAVA

```
public class MainActivity2 extends AppCompatActivity {

@Override
protected void onCreate(Bundle savedInstanceState) {
    super.onCreate(savedInstanceState);
    setContentView(R.layout.activity_main2);

LinearLayout layout = findViewById(R.id.container);
    CheckBox checkBox = new CheckBox(this);
    checkBox.setText("체크하세요");
```

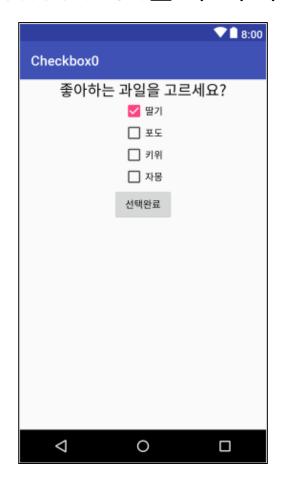

#### MainActivity2.JAVA

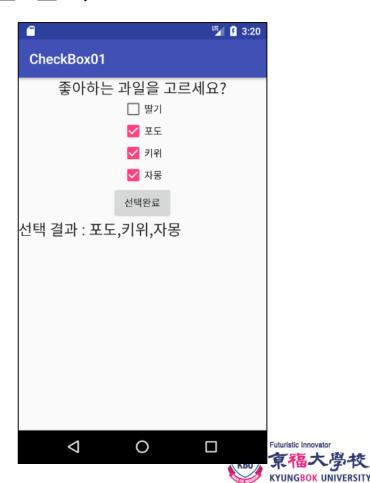

```
checkBox.setLayoutParams(new LinearLayout.LayoutParams(
              ViewGroup.LayoutParams. WRAP_CONTENT,
                  ViewGroup.LayoutParams. WRAP_CONTENT));
checkBox.setOnCheckedChangeListener(
                new CompoundButton.OnCheckedChangeListener() {
  @Override
  public void on Checked Changed (Compound Button View,
                                     boolean isChecked) {
     String msg = "You have " + (isChecked? "checked": "unchecked") +
                                    " this Check it Checkbox.";
     Toast. make Text (getBaseContext(), msg, Toast. LENGTH_SHORT).show();
});
if (layout != null) {
  layout.addView(checkBox);
```

- Layout 리소스 XML에 CheckBox를 추가하여 화면에 표시
  - CheckBox를 화면에 표시하려면, Layout 리소스 XML 파일에 CheckBox를 추가하면 된다

- 체크박스 XML과 JAVA 코드 작성 3단계
  - ■체크박스 변수 선언

CheckBox checkBox;

- 변수에 체크박스 위젯 대입 checkBox = findViewByld(R.id.checkbox);
- 체크박스가 변경될 때 동작하는 클래스 정의

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"</pre>
    android:layout_width="match_parent"
    android: layout_height="match_parent"
    android:orientation="vertical" >
    <TextView
        android: layout_width="wrap_content"
        android: layout_height="wrap_content"
        android:text="좋아하는 과일을 고르세요?"
        android: layout_gravity="center"
        android:textAppearance="?android:attr/textAppearanceLarge" />
```

```
<CheckBox
    android:id="@+id/checkBox1"
    android: layout_width="wrap_content"
    android: layout_height="wrap_content"
    android: layout_gravity="center"
    android:checked="true"
    android:text="딸기" />
<CheckBox
    android:id="@+id/checkBox2"
    android: layout_width="wrap_content"
    android: layout_height="wrap_content"
    android: layout_gravity="center"
    android:text="포도" />
```

```
<CheckBox
    android:id="@+id/checkBox3"
    android: layout_width="wrap_content"
    android: layout_height="wrap_content"
    android: layout_gravity="center"
    android:text="키위" />
<CheckBox
    android:id="@+id/checkBox4"
    android: layout_width="wrap_content"
    android: layout_height="wrap_content"
    android: layout_gravity="center"
    android:text="자몽" />
```

```
<But ton
        android:id="@+id/button1"
        android: layout_width="wrap_content"
        android: layout_height="wrap_content"
        android:layout_gravity="center"
        android:text="선택완료" />
    <TextView
        android:id="@+id/textView2"
        android: layout_width="wrap_content"
        android: layout_height="wrap_content"
        android:text="선택결과 : "
        android:visibility="invisible"
        android:textAppearance="?android:attr/textAppearanceLarge"/>
</LinearLayout>
```

#### ■ Java 프로그램

```
public class MainActivity extends AppCompatActivity {
  @Override
  protected void onCreate(Bundle savedInstanceState) {
     super.onCreate(savedInstanceState);
     setContentView(R.layout.activity_main);
     final CheckBox checkbok1 = findViewByld(R.id.checkBox1);
     final CheckBox checkbox2 = findViewByld(R.id. checkBox2);
     final CheckBox checkbox3 = findViewByld(R.id. checkBox3);
     final CheckBox checkbox4 = findViewByld(R.id.checkBox4);
     Button button = findViewById(R.id.button1);
     final TextView textview = findViewByld(R.id. textView2);
```

```
button.setOnClickListener(new View.OnClickListener() {
        @Override
        public void onClick(View v) {
           String result="";
           if (checkbok1.isChecked())
              result = checkbok1.getText().toString();
           if (checkbox2.isChecked()){
               if (result.equals(""))
                  result = checkbox2.getText().toString();
              else
                  result += ","+ checkbox2.getText();
           if (checkbox3.isChecked()) {
              if (result.equals(""))
                 result = checkbox3.getText().toString();
              else
                 result += "," + checkbox3.getText();
```

#### ■JAVA 프로그램

```
if(checkbox4.isChecked()){
        if (result.equals(""))
           result=checkbox4.getText().toString();
        else
          result += "," + checkbox4.getText();
     textview.setVisibility(View. VISIBLE);
     if (result.equals(""))
        textview.setText("선택 결과: 선택하지 않았습니다.");
     else
        textview.setText(("선택 결과:" + result));
});
```

- ■체크 박스는 레이아웃 파일에서 설정할 경우 <CheckBox>로 지정해줌
- ■속성 중에 checked를 'true'로 세팅하면 체크된 상태가 됨
- 코드 상에서는 isChecked()로 체크 여부를 확인하고, getText()로 텍스트를 추출
- isChecked()
  - ■체크박스 체크 여부
- setChecked(boolean checked)
  - ■체크 설정
- toggle()
  - 체크 상태를 토글

■ 다음과 같은 프로그램을 만들어보자

CheckBo	x02		<sup>11</sup>
□ 자장면	□ 짬봉	□ 우동	□ 볶음밥
	주문		
٥	(	)	

CheckBox	02		<sup>III</sup>				
✓ 자장면	□ 짬봉	✓ 우동	□ 볶음밥				
주문하기 감사합니다. 당신은 자장면 우동 주문하셨습니다.
